- 9/13: **2.8** The details of several steps in the particle-in-a-box model in this chapter have been omitted. Work out the details of the following steps:
 - **a.** Show that if $\Psi = A \sin rx + B \cos sx$ (A, B, r, and s are constants) is a solution to the wave equation for the one-dimensional box, then

$$r = s = \sqrt{2mE} \left(\frac{2\pi}{h}\right)$$

Solution.

$$\frac{-h^2}{8\pi^2 m} \cdot \frac{\partial^2 \Psi(x)}{\partial x^2} = E\Psi(x)$$

$$\frac{-h^2}{8\pi^2 m} \cdot \frac{\partial^2}{\partial x^2} (A\sin rx + B\cos sx) = E(A\sin rx + B\cos sx)$$

$$\frac{-h^2}{8\pi^2 m} \cdot \frac{\partial}{\partial x} (Ar\cos rx - Bs\sin sx) = E(A\sin rx + B\cos sx)$$

$$\frac{-h^2}{8\pi^2 m} \cdot (-Ar^2\sin rx - Bs^2\cos sx) = E(A\sin rx + B\cos sx)$$

$$\frac{Ar^2h^2}{8\pi^2 m} \cdot (-Ar^2\sin rx - Bs^2h^2\cos sx) = E(A\sin rx + B\cos sx)$$

$$\frac{Ar^2h^2}{8\pi^2 m} \sin rx + \frac{Bs^2h^2}{8\pi^2 m}\cos sx = AE\sin rx + BE\cos sx$$

$$0 = \left(\frac{Ar^2h^2}{8\pi^2 m} - AE\right)\sin rx + \left(\frac{Bs^2h^2}{8\pi^2 m} - BE\right)\cos sx$$

Choose x = 0.

$$= \frac{Bs^2h^2}{8\pi^2m} - BE$$

$$E = \frac{s^2h^2}{8\pi^2m}$$

$$\frac{8\pi^2mE}{h^2} = s^2$$

$$s = \sqrt{\frac{8\pi^2mE}{h^2}}$$

$$s = \sqrt{2mE}\frac{2\pi}{h}$$

With this result ...

$$0 = \left(\frac{Ar^2h^2}{8\pi^2m} - AE\right)\sin rx + \left(\frac{Bs^2h^2}{8\pi^2m} - BE\right)\cos sx$$
$$= \left(\frac{Ar^2h^2}{8\pi^2m} - AE\right)\sin rx + \left(B\left(\frac{s^2h^2}{8\pi^2m}\right) - BE\right)\cos sx$$
$$= \left(\frac{Ar^2h^2}{8\pi^2m} - AE\right)\sin rx + (BE - BE)\cos sx$$
$$= \left(\frac{Ar^2h^2}{8\pi^2m} - AE\right)\sin rx$$

Choose $x = \frac{\pi}{2r}$.

$$=\frac{Ar^2h^2}{8\pi^2m}-AE$$

Problem Set 0 CHEM 20100

$$r = \sqrt{2mE} \frac{2\pi}{h}$$

d. Show that substituting the value of r given in part c into $\Psi = A \sin rx$ and applying the normalizing requirement gives $A = \sqrt{2/a}$.

Solution.

$$1 = \int_{\text{all space}} \Psi \Psi^* \, d\tau$$
$$= \int_0^a \left(A \sin \frac{n\pi x}{a} \right) \left(A \sin \frac{n\pi x}{a} \right) dx$$
$$= \int_0^a A^2 \sin^2 \frac{n\pi x}{a} \, dx$$

Use $\sin^2 u = \frac{1-\cos 2u}{2}$.

$$= A^{2} \int_{0}^{a} \frac{1 - \cos\frac{2n\pi x}{a}}{2} dx$$

$$= \frac{A^{2}}{2} \left(\int_{0}^{a} dx - \int_{0}^{a} \cos\frac{2n\pi x}{a} dx \right)$$

$$= \frac{A^{2}}{2} \left([x]_{0}^{a} - \left[\frac{a}{2n\pi} \sin\frac{2n\pi x}{a} \right]_{0}^{a} \right)$$

$$= \frac{A^{2}}{2} \left((a - 0) - \left(\frac{a}{2n\pi} \sin 2n\pi - \frac{a}{2n\pi} \sin 0 \right) \right)$$

$$= \frac{A^{2}}{2} \left(a - \left(\frac{a}{2n\pi} \sin 2n\pi \right) \right)$$

Since n is an integer, $\sin 2n\pi = 0$.

$$= \frac{aA^2}{2}$$
$$\frac{2}{a} = A^2$$
$$A = \sqrt{\frac{2}{a}}$$
